Checklist: what to give the tester for a grey box test

- [ ] A list of roles in the system and two test accounts for each role.
- [ ] Test data in every account: orders, invoices, documents.
- [ ] An API description: OpenAPI (Swagger), a Postman collection or a list of endpoints.
- [ ] Environment addresses and a written decision: staging or production.
- [ ] A short architecture overview: which services, where data is stored, which third-party integrations.
- [ ] Mobile app builds, if they are in scope.
- [ ] A list of forbidden actions and out-of-scope systems.
- [ ] A contact reachable during the test and a way to stop it.
- [ ] Results of previous scans and pentests.
